

FlexiSlip

FlexiSlip is a truly flexible synthetic brick slip that looks exactly like a real clay brick but is just 4mm thick and weighs just 5kg/m². They come in a range of traditional and more modern colours and finishes and are very simple to use.

External Use

FlexiSlip can be used as the facade of an external wall insulation system (EWI) or on carrier boards to form curtain wall or rain screen cladding solutions, or applied directly to any solid surface for an instant transformation.

Internal Use

FlexiSlip can transform a dull wall into a stunning feature wall and requires only simple DIY skills. Pre-formed corners and the ability to cut and shape with scissors or a craft knife make FlexiSlip a simple and straightforward solution.

FlexiSlip Technical Detail

Area of use	Internal/External
Weight	5kg/m ²
Composition	Mineral/Acrylic
Pack quantity	1m ²
Adhesive	Acrylic/Cement based
Adhesive use	2.5-3kg/m ²

Sizes

Standard	210x50x3mm
Thin	380x40x3mm
Large	240x70x3mm
